## Education

### University of Texas at Arlington

Bachelor of Science in Computer Science

Aug 2029

GPA: 4.0

**Relevant Coursework:** Data Structure & Algorithm, Computer System, Intermediate Programming, Discrete Structure, Introduction to Computer Science & Engineering, Introduction to Programming

### Le Quy Don High School for the Gifted

Information Technology Specialization

Jun 2025

GPA: 3.6

## Technical Skills

**Languages:** Python, JavaScript, C/C++, SQL, HTML, CSS, Arduino, TypeScript

**Frameworks/Libraries:** Node.js, React, Next.js, Spring Boot, NumPy, Firebase

**Developer Tools:** Git, GitHub, Linux, Unix, MongoDB

## Leadership

**Le Quy Don's Social Work Team** — Head of Public Relation Department & Head of Media-Design Department Oct 2022 – Jun 2025

- Designed marketing materials and ran social media campaigns to raise awareness of volunteer initiatives among the student body
- Orchestrated 60 tutors in Volunteer Teaching projects to tutor over 100 underprivileged children
- Organized a meeting for Social Work Team Members with elderlies at the Center for Caring for people with revolutionary merits in Da Nang City to honor and gratitude for the International Women's Day

**Tech For Life Organization** — Founder & President

Jun 2023 - Sep 2024

- Founded **Tech for Life Organization** for fellow high school students with a mission to **develop both technical and soft skills** for young people who want to pursue a career in Technology
- Organized a **Python Bootcamp** for over **30 10th grade students** during the school year.

## Projects

### ForumVerse – Backend Development

*Python, TypeScript, HTML, CSS, JavaScript, Firebase, WebSocket*

- Built RESTful APIs for ForumVerse** using **Python, TypeScript, FastAPI** to support core features like creating posts, commenting, and user interactions, enabling efficient communication between frontend and backend, and **WebSocket** for immediate data traversal.
- Designed and implemented a MongoDB database** to store user accounts and forum data, improving data organization and simplifying query operations for backend.
- Developed backend functionality** including **user authentication** and **basic access control** using FastAPI and JWT, helping secure user data and ensure only authorized access to forum features.

### Fundamental Wind Caution System

*Arduino, Python*

- Built an Arduino-based wind monitoring system and **processed sensor data in Python for real-time analysis and alerting, achieving 90% accuracy in detecting unsafe wind conditions on bridges.**
- Developed Python scripts to **collect, filter, and log wind-speed data from Arduino devices, improving wind-caution decision reliability and maintaining 70% compliance with bridge safety thresholds.**

### Fun with Snake

*HTML, CSS, JavaScript*

- Built a simple **Snake Game using HTML, CSS, and JavaScript**, gaining hands-on experience with **basic front-end development concepts** such as layout styling, event handling, and updating the game state.
- Applied **introductory AI logic** (rule-based movement and basic decision-making) to control game behavior, **strengthening understanding of JavaScript logic, problem-solving, and real-time program flow.**
